

TLS Disablement Notice

Per PCI payment processing requirements, the security protocols for TLS 1.0 and TLS 1.1 will be disabled for Learning Stream on May 6th, 2018.

TLS is a browser security protocol used for secure communications. Almost all browsers now use TLS 1.2 for secure communication, so the impact of this change should not be noticed by you or your registrants. TLS 1.2 is already being used by Learning Stream for communication with payment processing solutions. This change will disable TLS 1.0 and TLS 1.1 for all secure connections with Learning Stream.

If you have any question or concerns, please contact your support representative. Downtime is not expected during the disablement process.
